No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Description

vel polypeptides exhibiting a higher phosphodiesterase PDE7 activity an endogenous full length PDE7, for screening of PDE7 inhibitors useful preventing and treating autoimmune disorders and inflammatory Novel

in prevent diseases.

Claim 2; Page 124-125; 137pp; English.

The invention relates to novel polypeptides exhibiting a higher phosphodiesterase 7 (PDB7) catalytic activity than endogenous full length beb57 and nucleic acid molecules encoding such polypeptides. Sequences of the invention are used for screening compounds that inhibit PDE7 activity, PDB7 inhibitors are used for manufacturing a pharmaceutical composition useful for the treatment or prevention of various pathological conditions such as diseases affecting the immune system, including acquired immune deficiency syndrome (AIDS), rejection of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          200
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              260
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 320
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              440
                                                           Novel polypeptides exhibiting a higher phosphodiesterase PDE7 activity than endogenous full length PDE7, for screening of PDE7 inhibitors useful in preventing and treating autoimmune disorders and inflammatory diseases.
                                                                                                                                                                                                          The invention relates to novel polypeptides exhibiting a higher phosphodiesterase 7 (PDE7) catalytic activity than endogenous full length PDE7 and nucleic acid molecules encoding such polypeptides. Sequences of the invention are used for screening compounds that inhibit PDE7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 80
                                                                                                                                                                                                                                                    the invention are used for screening compounds that inhibit PDE7 activity. PDE7 inhibitors are used for manufacturing a pharmaceutical composition useful for the treatment or prevention of various pathological conditions such as diseases affecting the immune system, including acquired immune deficiency syndrome (AIDS), rejection of transplant, autoimmune disorders such as T-cells related diseases for e.g. rheumatoid arthritis, inflammatory diseases such as respiratory inflammation diseases including chronic obstructive pulmonary disease (COPD), asthma, gastrointestinal inflammation diseases such as respiratory disease, colitis, pancreatitis and different types of cancers including leukaemia. The present sequence is human PDE7A2 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DQTALYIRMIGDVRVRSRAGFESERRGSHPYIDFRIFHSQSEIEVSVSARNIRRLLSFQR

```

The invention relates to novel polypeptides exhibiting a higher phosphodiesterase 7 (PDE7) catalytic activity than endogenous full length PDE7 and nucleic acid molecules encoding such polypeptides. Sequences of the invention are used for screening compounds that inhibit PDE7 activity. PDE7 inhibitors are used for manufacturing a pharmaceutical composition useful for the treatment or prevention of various pathological conditions such as diseases affecting the immune system, including acquired immune deficiency syndrome (ADES), rejection of transplant, autoimmune disorders such as T-cells related diseases for transplant, autoimmune disorders such as T-cells related diseases for e.g. rheumation diseases including chronic obstructive pulmonary disease (COPD), asthma, gastrointestinal inflammation diseases such as Crohn's disease, collitis, pancreatitis and different types of cancers including leukaemia. The present sequence is human PDE7Al protein Novel polypeptides exhibiting a higher phosphodiesterase PDE7 activity than endogenous full length PDE7, for screening of PDE7 inhibitors useful in preventing and treating autoimmune disorders and inflammatory Disclosure; Fig 1; 137pp; English.

οĸ DNA mols. isolated from human glioblastoma cells - encode RAS-related cyclic nucleotide phosphodiesterase proteins.

Claim 4; Col 67-70; 101pp; English.

The sequences given in AAW00092-94 are encoded by plasmid fragments which contain human glioblastoma cell cDNA inserts which are capable of conteain human glioblastoma cell cDNA inserts which are capable of correcting the heat shock sensitivity of the phosphodiesterase deficient yeast strain 10DAB. Several cDNA's were isolated and sequenced. pTWA2 encodes a novel human gene. From computer analysis, pTW22 putatively encodes a protein homologous to various cAMP phosphodiesterases, such as the brownie Ca2+/calmodulin dependent cAMP phosphodiesterases, such as correct the heat chop phosphodiesterase. Sequences related to pTW22 were found to be expressed in human heart. Plasmid pTW22 was unable to correct the heat shock sensitivity of RAS2(vall) yeast strains. It thus appears that the cast shock sensitive to phenotypic reversion by mammalian cAMP phosphodiesterase clones than is the restrain. The inserts in the plasmids pTM3 and pTM72 were also characterised. These two different cAMP phosphodiesterase cDNA's insert and the pJC99 insert. Biochemical analysis of call lysates has celtablished that the cDNA's of pTM3 and pTM72, pJC44x and pRATDPD encode correct PF field.)

The present invention describes new isolated RAS-related polypeptides and mammalian cyclic nucleotide phosphodiesterases (PDBS) RAS-related polypeptides are capable of complementing a defective RAS function in yeast. The products can be used for screening for agents which can modify, complement or suppress a genetic defect in a biochemical pathway in which camp participates, or in a blochemical pathway which is controlled, directly or indirectly, by a RAS protein and other proteins affecting cell growth and maintenance. Developing agents that will selectively act upon PDBs is directed toward reproducing the desirable selectively act upon PDBs is directed toward reproducing the desirable contractility, anti-inflammation, yet without causing the undesirable effects of cyclic nucleotides, e.g. bronchodilation, increased myocardial contractility, anti-inflammation, yet without causing the undesirable effects, e.g. increased heart rate or enhanced lipolysis. The products can also be used for therapeutic, diagnostic and prognostic uses an also be wall and AAY49830, represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       360

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      253 VTPWDILLSLIAAATHDLDHPGVNQPFLIKTNHYLATLYKNTSVLENHHWRSAVGLLRES 312
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          LFSLHGLIEYFHLDMMKLRRFLVMIQEDYHSQNPYHNAVHAADVTQAMHCYLKEPKLANS 252
                                       is
                                                                                                                                                                                                              The present invention describes a purified and isolated DNA (I) which encodes a mammalian cyclic nucleotide phosphodiesterase and its an insert present in the plasmids ppDE46 (ATCC 69552), ppDE43 (ATCC 69551) or ppDE339 (ATCC 69550). The DNA molecules are used to modify, complement or suppress a genetic defect in a biochemical pathway in which CAMP participates and are also used as hybridisation probes. The present invention also describes methods for detecting mammalian genes encoding proteins which can function in microorganisms, particularly yeast, to modify, complement, or suppress a genetic defect associated with an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
Novel isolated DNA encoding a mammalian cyclic nucleotide phosphodiesterase is present in plasmids pPDE46, pPDE43 or pPDE339 and used to modify a genetic defect in a biochemical pathway in which CAMP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 motified by compression of suppress a second action the identified by the same and a suppression of the microorganism. AAAB162 to AAAB8218 and AAB29614 to AAB20640 represent sequences used in the exemplification of the present invention

The invention relates to novel polypeptides exhibiting a higher

thosphodiesterase 7 (PDE7) catalytic activity than endogenous full length

the invention are used for screening compounds that inhibit PDE7

the invention are used for screening compounds that inhibit PDE7

activity. PDE7 inhibitors are used for manufacturing a pharmaceutical

composition useful for the treatment or prevention of various

composition useful for the treatment or prevention of various

composition useful for the treatment or prevention of various

composition useful for the treatment or prevention of various

composition useful for the treatment or prevention of various

composition useful for the treatment or prevention of various

composition useful for the treatment or prevention of various

composition useful for the treatment or prevention of various

composition useful for the inflammatory diseases including chronic obstructive pulmonary disease

composition diseases including chronic obstructive pulmonary disease

composition as thum, gastrointestinal inflammation diseases such as Crohn's

disease, colitis, pancreatitis and different types of cancers including

composition relative pulmonary diseases

composition as the present sequence is rat PDE7 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               rel polypeptides exhibiting a higher phosphodiesterase PDE7 activity an endogenous full length PDE7, for screening of PDE7 inhibitors useful preventing and treating autoimmune disorders and inflammatory

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to novel polypeptides exhibiting a higher phosphodiesterase 7 (PDE7) catalytic activity than endogenous full length blorg and nucleic acid molecules encoding such polypeptides. Sequences of the invention are used for screening compounds that inhibit PDE7 activity. PDE7 inhibitors are used for manufacturing a pharmaceutical composition useful for the treatment or prevention of various pathological conditions such as diseases affecting the immune system, including acquired immune deficiency syndrome (ALDS), rejection of transplant, autoimmune disorders such as T-cells related diseases for

<u>ب</u> Soulard 2002-479561/51. N-PSDB; AAD39377 Novel polypeptides exhibiting a higher phosphodiesterase PDE7 activity than endogenous full length PDE7, for screening of PDE7 inhibitors useful in preventing and treating autoimmune disorders and inflammatory diseases.

Claim 2; Page 125-127; 137pp; English.

The invention relates to novel polypeptides exhibiting a higher phosphodiesterase 7 (PDE7) catalytic activity than endogenous full length byDE7 and nucleic acid molecules encoding such polypeptides. Sequences of the invention are used for screening compounds that inhibit PDE7 activity. PDE7 inhibitors are used for manufacturing a pharmaceutical

The invention relates to novel polypeptides exhibiting a higher phosphodiesterase 7 (PDE7) catalytic activity than endogenous full length PDE7 and nucleic acid molecules encoding such polypeptides. Sequences of the invention are used for screening compounds that inhibit PDE7 activity, PDE7 inhibitors are used for manufacturing a pharmaceutical composition useful for the treatment or prevention of various pathological conditions such as diseases affecting the immune system, including acquired immune deficiency syndrome (ALDS), rejection of transplant, autoimmune disorders such as T-cells related diseases for e.g. rheumatoid arthritis, inflammatory diseases such as respiratory inflammatoin diseases including chronic obstructive pulmonary disease (COPD), asthma, gastrointestinal inflammation diseases such as Crohn's disease, colitis, panceratitis and different types of cancers including leukaemia. The present sequence is mouse PDE7A2 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GLFSHLPLESRQQMETQIGALILATDISRQNEYLSLFRSHLDRGDLCLEDTRHRHLVLQM 300

diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection, and many other disorders listed in the specification. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sumburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotexis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present sequence represents a novel secreted protein of the invention. Note: The

                                                                                         ABB07912;
RESULT 13
                                                                 The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunosorbant assays (ELISA). Disorders which are diagnosed or treated include autoimmune

This represents a splice variant of cyclic adenosine monophosphate (cAMP) phosphodiesterase type 7 (PDE7a3). The polypeptide can be expressed by standard recombinant methodology. The PDE7a3 splice variant polypeptides and polynucleotides are useful for treating cardiovascular diseases, asthma, allergy, inflammatory diseases, fertility disorders and immunoregulator disorders. The polynucleotides are useful for producing transgenic animals, which include knock-in animals (in which an animal gene is replaced by human equivalent within the genome of the animal, useful in drug discovery process, for target validation. The PDE7a3 splice variant polypeptides and polynucleotides are useful as vaccines for inducing an immunological response in a mammal New polypeptide of splice variant of cyclic adenosine monophosphate phosphodiesterase type 7 and polynucleotides, useful as vaccines for inducing immune response against diseases e.g. cardiovascular diseases Claim 2; Page 33-36; 40pp; English.

Claim 2; Fig 8B; 165pp; English

The present invention relates to the isolation of novel cyclic nucleotide phosphodiesterase (PDE) proteins such as PDE8A, PDE7A3, TDPDE2A, TDPDE2B, TDPDE2B, TDPDE2B, TDPDE2C or TDPDE2E, TDPDE2B, TDPDE2B, TDPDE2C or TDPDE2E, TDPDE2B, TDPDE2B, TDPDE2C or TDPDE2B, TDPDE2B, TDPDE2B, TDPDE2C or TDPDE2B, TDPDE2B, TDPDE2B, TDPDE2B, TDPDE3B, orquence amount we encoused by Abkabbil. However, since the present assignment is of poor quality in the specification many of the residues are illegible

WPI; 2000-433274/38. N-PSDB; AAA46651. Nucleic acids encoding recombinant phosphodiesterase (PDE)-XIV enzymes, useful for preventing diagnosing and treating diseases associated with inappropriate PDE-XIV expression and/or activity.

Disclosure; Page 45-47; 104pp; English.

The present sequence represents a phosphodiesterase (PDE)-XIV enzyme. The phosphodiesterase polynucleotide and polypeptide may be used in the phosphodiesterase polynucleotide and polypeptide may be used in the inappropriate PDE-XIV expression. For example, the polynucleotide be administered to treat diseases by rectifying mutations or deletions in a patient's genome that affect the activity of PDE-XIV. They may also be used to study the expression and function of PDE-XIV polypeptides and that role in metabolism. The PDE-XIV polypeptides may be used as antigens in the production of antibodies against PDE-XIV and in assays to identify modulators (agonists and antagonists) of PDE-XIV and and activity. The anti-PDE-XIV antibodies and PDE-XIV antagonists may also be used to down regulate PDE-XIV expression and activity (i.e. the PDE-XIV corposition for the treatment of a disoorder associated with inappropriate PDE-XIV expression and or activity and to screen for agents that can modulate PDE-XIV expression and to screen for agents that can may also be used as diagnostic agents for detecting the presence of PDE-XIV may also be used as diagnostic agents for detecting the presence of PDE-XIV may also be used as diagnostic agents for detecting the presence of PDE-XIV may also be used as diagnostic agents.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 20,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence

Sequence 20. Application US/07688352C
Patent No. 5527896
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Colicelli, John J.
TITLE OF INVENTION: Clouling by Complementation and Related
TITLE OF INVENTION: Processes
NUMBER OF SEQUENCES: 57
CORRESPONDENCE ADDRESSE:
ADDRESSEE: Marshall, O'Toole, Gerstein, Murray & ADDRESSEE: Bicknell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CURRENT APPLICATION DATA:
